

OBJECTIVE

ML Engineer with 2+ years of experience in RAG and multi-agent systems, focused on building scalable and reliable AI solutions for production-oriented workflows.

EDUCATION

Belarusian State University of Informatics and Radioelectronics (BSUIR)

July 2022 – June 2026

GPA: 8.0/10 — 4th year student

SKILLS

Languages

Python, Bash

Frameworks

FastMCP, FastAPI, LangChain, LangGraph

Databases

PostgreSQL, MongoDB, Chroma, FAISS

Tools

Git, GitHub, Docker, VSCode, n8n

LLM

OpenAI, LLaMA, Prompt Engineering, Semantic Search

Architectures & Patterns

RAG, Multi-agent Workflows, Orchestration

EXPERIENCE

Machine Learning Engineer

July 2024 – Nov 2025

IFortex

- Working on RAG-based systems, multi-agent workflows, and LLM-driven automation tools.
- Developing retrieval pipelines, embeddings search, and FastAPI services for production-oriented applications.
- Contributing to real-world AI solutions, including document processing, ranking algorithms, and system orchestration.
- Collaborating with ML and backend teams on integration of Llama and OpenAI models into internal products.

AI Specialist Intern

Apr 2023 – July 2024

HappyAI

- Developed chatbots and internal automation tools leveraging OpenAI API.
- Implemented conversational pipelines, prompt logic, and basic retrieval components.
- Assisted in testing and improving response quality for task-specific AI assistants.

PROJECTS

Multi-Agent CV Screening (HR Tech)

- Built multi-agent workflow in LangGraph for automated CV parsing and ranking.
- Developed pipelines for text ingestion, normalization, and embedding-based retrieval.
- Tuned vector search, caching, and ranking to reduce latency and improve relevance.
- Set up n8n orchestration and production monitoring.

Tech: Python, FastAPI, LangChain, LangGraph, PostgreSQL, Chroma, Docker, n8n, OpenAI, LLaMA

AI Summarization Service (Document Processing)

- Built modular summarization pipeline with interchangeable LLM backends.
- Integrated Gradio for rapid prototyping and testing summary modes.
- Added caching, batching, and rate limiting to cut API overhead.
- Created prompt templates and performance benchmarks.

Tech: Python, FastAPI, Gradio, OpenAI, T5, Docker
